Blue Single-Head Adult Stethoscope - Ideal+ Holtex

A single-head adult stethoscope for routine auscultation

The **blue single-head adult stethoscope is** a medical device designed for healthcare professionals, healthcare facilities, emergency services, or educational institutions seeking simple and functional auscultation equipment.

Its **single-head design** allows for routine examinations of **adult** patients. Its simple and practical design makes it easy to incorporate into a doctor's office, a nursing station, a first-aid kit, or educational materials.

A simple, comfortable, and easily recognizable design

This model features a **cold-protection ring** designed to minimize discomfort when the chestpiece comes into contact with the skin. This feature helps make auscultation more comfortable for the patient, especially during repeated use.

The aluminum yoke integrated into the tubing ensures a secure grip and intuitive use. The blue color also makes it easy to identify the stethoscope among other medical equipment or training materials.

Equipment Suited for Healthcare Professionals and Training

The **Ideal+ Holtex Blue Single-Head Adult Stethoscope** is designed to meet the daily needs of professionals seeking an affordable, clear, and easy-to-use stethoscope. It can be used in a variety of settings: doctors' offices, healthcare facilities, emergency departments, infirmaries, or healthcare training programs.

This model is **CE-marked** as **a Class I medical device** and is part of the Ideal+ Holtex line, available in several versions depending on auscultation needs.

Frequently Asked Questions

What is the difference between this and a dual-head stethoscope?

A **single-head stethoscope** has only one listening side. It is suitable for everyday use requiring equipment that is simple and quick to use.

Does the stethoscope have a cold-protection ring?

Yes, this model is equipped with a **cold-protection ring** to improve patient comfort during skin contact.
