Set of 4 Sani-Man Adult CPR manikins

manikins The Sani-Man CPR adult manikins (set of 4) are designed for training in cardiopulmonary resuscitation (CPR). This set allows multiple trainees to be equipped at the same time, with one manikin per workstation, to make the exercises run more smoothly and effectively.

Each adult RCP Sani-Man “ manikin ” allows learners to practice opening the airway by **tilting the head and lifting the chin**, performing chest compressions, and administering rescue breaths. The visible rise of the chest helps the instructor verify that ventilation is being performed correctly.

The **face mask** system **with integrated lungs** minimizes the need for cleaning, disinfection, and disassembly between uses. The foam-filled torso provides appropriate resistance for compressions, while tactile markers facilitate proper hand placement.

Technical Specifications

	Set of 4 adult CPR training manikins manikins
	4 adult CPR manikins manikins
	Airway management, rescue breaths, chest compressions
	Head tilt and chin lift
	Visible rise of the chest
	Palpable landmarks for hand placement
	Foam-filled torso with compression resistance
	Durable vinyl
	Face mask with integrated lungs
	4 adult- manikins, carrying bag, 100 face mask/lung sets, 3 airways, and user manual

Shipping dimensions	21 x 19 x 16 inches, or approximately 53.3 x 48.3 x 40.6 cm
Shipping weight	30 lb, or approximately 13.6 kg

Uses

- adult CPR training;
- group training sessions with multiple learners;
- learning chest compressions and rescue breaths;
- first aid, emergency response, occupational health and safety (OHS), or equivalent training;
- use in training centers, schools, associations, or emergency response organizations.

FAQ – Set of 4 Sani-Man Adult CPR manikins

How is hygiene managed during sessions?

The system uses a **face mask with built-in lungs**. This design minimizes the need for cleaning, disinfection, and disassembly between users.

How can you verify that rescue breaths are being performed correctly?

Visible chest rise allows for visual confirmation that the rescue breaths are being performed correctly.

Do the Sani-Man adult CPR manikins s help trainees practice proper hand placement?

Yes. The " manikins " feature **tactile markers** to help learners position their hands correctly for chest compressions.
