

Adult Spider Strap for Hard Immobilization Surface - Holtex

Adult Spider Strap for Immobilization on a Hard Surface

The **Holtex adult spider strap** is a restraint accessory designed to **secure an adult patient on a hard surface**. It is used during emergency response, lifting, or transport procedures to limit the victim's movements and enhance safety during care.

Thanks to its multi-point restraint design, the spider strap stabilizes the patient at the torso, pelvis, and lower limbs. It is a practical solution to complement the use of a **hard immobilization board**, particularly in emergency, evacuation, or medical transport situations.

A practical restraint system for emergency response

The adult spider strap is particularly well-suited for professionals who need equipment that is easy to set up, reliable, and quickly accessible. It facilitates securing the patient to the hard board while allowing for an organized setup during interventions.

Its adult size meets the needs of emergency response teams, paramedics, security services, local governments, healthcare facilities, and organizations equipped with evacuation and immobilization equipment.

What are the uses for an adult spider strap?

The **spider strap for a hard stretcher** is used to secure a patient in position during immobilization or transport. It complements the hard stretcher and any associated accessories, such as a head immobilizer, to ensure safe patient care.

What are the advantages of this model?

This adult model offers a restraint solution suitable for professional emergency response. It distributes attachment points across the patient's body, limits movement during handling, and facilitates the work of emergency response teams.

A Class I medical device with CE marking

The Holtex SBRAN16 adult spider strap is a **Class I medical device**. It bears the **CE mark** and is intended for professional use in the immobilization and transport of patients.

Non-sterile, it integrates easily into emergency or response equipment, including a hard stretcher, a standard stretcher, or additional restraint accessories.
