

1½" M/M BSP Water Tap for Fire Water Supply

1½" M/M BSP Water Tap for Fire Water Supply

The **1½" M/M BSP water tap** is an accessory designed to quickly create a water intake point on a pipe or system equipped with BSP (British Standard Pipe) fittings. Robust and easy to use, it efficiently supplies water to a fire handheld nozzle, fire hose, motor pump, or any other equipment requiring a temporary water supply.

Thanks to its **two 1½-inch male BSP fittings**, it integrates easily into existing water systems and provides a practical solution for fire departments, local governments, industrial facilities, farmers, and maintenance crews.

An essential accessory for creating a water supply point

The water tap allows water to be drawn from a pipe equipped with a BSP threaded connection to quickly supply an emergency response device. It facilitates firefighting operations, filling reservoirs, industrial cleaning, and supplying hydraulic equipment.

Its simple design ensures quick deployment, even in emergency situations.

A rugged design for field operations

Made from materials resistant to the stresses of heavy-duty use, the water tap is designed to withstand the conditions encountered during emergency response operations by first responders and professionals. Its BSP thread ensures a reliable connection and minimizes the risk of leaks during water supply.

Compact and easy to transport, it fits naturally into emergency response vehicles, fire trailers, agricultural equipment, or maintenance workshops.

Technical Specifications

- **Type:** Water Tap

- **Connections:** 1½" BSP male/male
- **Thread:** BSP (British Standard Pipe)
- **Use:** creating a water supply point
- **Installation:** Quick installation on BSP-compatible systems
- **Construction:** sturdy for professional use

Professional applications

- Departmental Fire and Rescue Services (SDIS)
- Industries
- Local governments
- Agricultural operations
- Industrial maintenance
- Power Supply for Motor Pumps
- Connection of handheld nozzles
- Industrial cleaning
- Temporary fire protection

The Benefits of the 1½" BSP Water Tap

- Quick setup of a water intake point
- Reliable connection thanks to the BSP thread
- Quick and easy installation
- Compatible with a wide range of hydraulic equipment
- Compact and easy to transport
- Designed for heavy-duty professional use

MMF, a specialist in hydraulic firefighting fittings and accessories

MMF offers a complete line of fittings, adapters, splitters, manifolds, valves, and accessories for fire protection systems and emergency response operations. The **1½" M/M BSP water tap** completes this offering by providing a simple and reliable solution for quickly creating a water supply point on compatible systems.
