

Metal Fire Alarm Control Drum

Metal Control Reel for Firefighting Equipment

The **control reel** is a metal device designed to facilitate the winding, storage, and handling of a hose or flexible component compatible with the relevant system. Its sturdy and compact design makes it suitable for use in professional environments and with fire safety equipment.

Made entirely of metal with a **red finish**, this reel features two side flanges that hold the hose securely wound around the central shaft. Its lower frame provides good stability during handling and makes it easy to position in the area of use.

A simple and robust design

The reel consists of a **central metal shaft** connecting two large circular flanges. This design guides the winding process and ensures the material is properly secured on the reel.

The integrated metal stand provides a stable base and includes a handle that makes it easy to move the entire unit. This design prioritizes ease of use and mechanical strength for professional applications.

Reel for winding and storing equipment

A control reel helps organize the storage of a hose or compatible equipment while making it easier to deploy and store. Holding the material between the two flanges minimizes the risk of misalignment of the wound item and helps maintain a clean and orderly storage area.

This type of equipment is particularly useful when the equipment must be regularly unrolled and then put back in place after use.

Features of the control reel

- **Type:** Control reel
- **Construction:** metal
- **Color:** red
- **Configuration:** two side flanges

- **Shaft:** metal central shaft
- **Mounting:** integrated metal frame
- **Handling:** handle integrated into the support
- **Use:** winding, holding, and storing a compatible flexible item

The advantages of the control drum

- Sturdy metal construction
- Two flanges to secure the wound material
- Extra-long central shaft
- Integrated support for stability
- Handle for easy handling
- Simple design suitable for professional use
- Red finish suitable for fire safety equipment

Equipment suitable for professional installations

Thanks to its metal construction and functional design, the **control drum** can be integrated into various installations requiring the storage or regular handling of a hose or flexible equipment. It provides a practical solution for keeping equipment organized and readily available for use.

MMF, a specialist in fire safety equipment

MMF offers a complete range of equipment and accessories designed for professionals in fire safety, industry, and maintenance. The **metal control reel** complements equipment that requires a sturdy and functional solution for winding and storing related materials.
