Thermal Burn First-Aid Kit

The **Burn First Aid Kit** contains all the supplies needed to provide first aid for thermal burns in a single container. It is designed to provide **treatment for up to three patients**, with products for cooling the burn, protecting the affected area, and applying a secondary dressing.

Its compact size allows it to be placed near a workstation where there is a risk of burns, while still making it easy to carry quickly thanks to its handle. A **specific “Burn” label** also makes it easy to identify among other first-aid supplies.

Contents specifically designed for thermal burns

This kit does not contain a standard multi-risk assortment. It contains products specifically selected for burn care, including **tubes of gel water** to cool the affected area and **Urgotul® compresses** designed to protect the burn without sticking to the wound.

Large sterile dressings, elastic bandages, and adhesive tape are then used to apply the dressing. Disposable gloves and saline solution round out the kit, providing all necessary supplies in a single container.

Technical Specifications

Burn First Aid Kit	
Usage	Up to 3 thermal burn treatments
Material	Polypropylene (PP)
Color	White
Carrying handle	Includes
Installation	Wall mount
Identification	"Burn" Signage
Dimensions	240 × 205 × 48 mm

Sterile gauze pads, 30 × 30 cm	3
Elastic bandages 3 m × 7 cm	3
Tear-off adhesive tape, 5 m × 2 cm	1 roll
Illustrated instructions	1

A case that’s easy to place near high-risk areas

At just **48 mm thick** and weighing 433 g, the case is compact. The wall mount allows it to be placed in a fixed, easily identifiable location, while the handle makes it easy to carry directly to the person in need of care.

This setup is particularly suitable for **workshops, commercial kitchens, maintenance areas, utility rooms, or industrial environments** where a heat source or activity may expose users to a burn risk.

Why use a kit specifically designed for burns?

A dedicated set ensures that appropriate products are immediately available without having to search for them in a general-purpose first-aid kit. Gelified water, Urgotul® compresses, and dressing supplies are all contained in the same case, along with an illustrated instruction sheet detailing how to use the various items.

This kit is intended for **first aid**. A severe, deep, or burn on a sensitive area requires appropriate medical care.
