Wall-mounted bandage dispenser

The **wall-mounted bandage dispenser** offers a simple solution for keeping a roll of bandages readily available right in the work area. Once installed, it allows you to unroll the bandage and **cut off the length you need**, without having to use pre-cut bandages of fixed sizes.

The dispenser is shipped empty so you can choose the bandage best suited to the task. It accommodates various types of rolls, including non-woven, elastic, or plastic bandages, up to **5 m in length and 8 cm in width**.

Cut the bandage to fit the size of the wound

The “on-demand” dispensing system allows you to directly adjust the length of the bandage used. This solution is particularly practical when a single workstation may encounter **small cuts of varying sizes** and a pre-cut bandage is not always suitable.

The roll remains in its wall-mounted dispenser and can be used as needed.

Technical Specifications

Wall-mounted bandage dispenser	
Material	Transparent polycarbonate
Dimensions	120 × 140 × 80 mm
Empty weight	290 g
Maximum roll length	5 m
Maximum bandage width	8 cm
Installation	3-point wall mounting
Mounting hardware included	Screws and anchors
Delivery	Dispenser shipped empty

Quickly check the remaining supply of bandages

The **transparent polycarbonate** design allows you to see the roll without opening the dispenser. This makes it easier to check the remaining quantity and determine when a new roll is needed.

This visibility is particularly useful when multiple dispensers are installed in a workshop or at different workstations and need to be checked regularly.

What types of bandages can be used in the dispenser?

The dispenser can hold various types of **roll-style cut-to-size or self-adhesive bandages**—whether nonwoven, elastic, plastic, white, or blue—as long as they do not exceed the specified maximum dimensions.

The choice of roll can thus be tailored to the work environment. For example, a blue bandage may be easier to identify during certain activities, while a white or flesh-colored model may be suitable for more general uses.

Place the bandage right where it’s used

The **three mounting points** allow the dispenser to be positioned at a specific location on the workstation. Multiple units can be distributed throughout a workshop to place the bandages closer to the areas where minor cuts are most likely to occur.

Its compact size of 120 × 140 × 80 mm minimizes wall space usage and allows it to complement an existing first-aid system without replacing a kit or cabinet intended for other types of care.
