Occupational Medicine Restock Kit

The **Occupational Health Restock Kit** is designed to replenish the contents of a first-aid cabinet located at the workplace. It combines in a single package the main products and supplies needed for first aid, to replace items that have been used or are nearing their expiration dates.

Its contents address several common situations: **minor wounds, bleeding, securing a bandage, protecting a limb, eye irrigation, or treatments requiring personal protective equipment**. It can thus serve as a restocking kit for various workplace environments, from offices to workshops or warehouses.

A restock kit designed for fixed first-aid stations within the company

Unlike an individual first-aid kit or vehicle kit, this set is designed to **replenish a first-aid cabinet kept in a designated location**. It allows you to group together the supplies and accessories needed for restocking without having to assemble the kit item by item.

This setup is particularly well-suited for companies with a first-aid station shared by multiple employees or serving multiple work areas.

Package Features

Occupational Health Restock Kit	
Usage	Restocking a workplace first-aid cabinet
Packaging	Cardboard packaging
Dimensions	290 × 230 × 80 mm
Weight	600 g

70° alcohol swabs	10
Coalgan® Sterile Hemostatic Tufts	1 pack of 2
Sterile saline solution	4 vials
First aid booklet in 10 languages	1

A kit covering various types of first aid

The kit combines various supplies to address the most common workplace incidents. **Sterile bandages and gauze pads** protect minor wounds, while the pressure pad and hemostatic wicks provide additional solutions when compression is needed.

Bandages, adhesive tape, and triangular bandages round out the kit for support and protection. The saline solution provides a rinsing solution for minor splashes.

A Basic Kit to Be Adapted to the Company’s Risks

There is no single kit composition suitable for all workplaces. The nature of the business, identified risks, the size of the premises, or even team organization may require adding specific equipment to this kit.

The Labor Code stipulates that first-aid supplies at the workplace must be **appropriate for the nature of the risks and easily accessible**. This kit therefore serves as a base for restocking that can be supplemented according to the specific needs of the workplace.

Facilitating First Aid Kit Inspections

A first-aid kit must remain fully stocked despite the gradual use of its contents. During periodic inspections, it is

helpful to check for missing items, opened packages, and any expired dates.

Keeping a **dedicated restocking kit** on hand allows you to quickly replace used supplies and keep equipment available without having to wait for a new full set to be assembled.
