Mechanical Workshop and Maintenance Restocking Kit for 10 to 20 People

The **"Mechanical Workshop and Maintenance" restocking kit for 10 to 20 people** is designed to restock a first-aid cabinet in repair, maintenance, or industrial mechanical workshops. It combines, in a single package, supplies suitable for incidents that may occur while working on machines, vehicles, metal parts, or technical equipment.

The contents are not limited to minor cuts. They also include supplies for **more severe bleeding, minor burns, eye injuries, and the recovery of a severed hand or fingers**.

A kit designed for workshop hazards

Disassembly, machining, adjustment, or maintenance operations can expose hands to sharp edges, metal parts, or cutting tools. The kit therefore includes several sizes of bandages, sterile compresses, and **4 pressure bandages** to provide varying levels of protection depending on the injury.

A chlorhexidine cleansing solution, elastic bandages, and adhesive tape round out the kit for cleaning, protecting, and securing the dressings.

Kit Features

Mechanical Workshop and Maintenance Restock Kit	
Number of People	10 to 20 people
Location	Mechanical and industrial maintenance workshops
Packaging	Cardboard packaging
Dimensions	290 × 230 × 80 mm
Weight	740 g

Contents of the restock kit

Emergency blanket	1
3-compartment insulated bag	1
Triangular bandage	1
Emergency hemostatic pad	1
Adhesive bandages, 20 × 72 mm	25
Adhesive bandages, 53 × 70 mm	10
Adhesive bandages 10 × 6 cm	8
Adhesive bandage, cut-to-size, 1 m × 6 cm	1
Sterile compression bandages	4
Burn dressings 43 × 68 mm	5
Burn dressings 67 × 110 mm	5
Individual sterile gauze pads 20 × 20 cm	20
Elastic bandages 3 m × 5 cm	2
Elastic bandages, 3 m × 7 cm	2
Tear-off adhesive tape, 5 m × 2 cm	1 roll
Lister scissors, 15 cm	1 pair
Splinter remover with magnifying glass	1
Disposable gloves	3 pairs
Chlorhexidine cleaning solution 50 ml	1 spray bottle
Sterile saline solution	10 vials
Sealed eye patches	10
Plastic bags	2
First aid booklet in 10 languages	1

Tweezers with a magnifying glass for small particles

The **splinter tweezers with magnifying glass** are one of the key components of this kit. They allow for better visualization of small splinters or surface particles, a situation that can occur, for example, when working on metal parts, materials, or mechanical equipment.

Lister scissors and disposable gloves round out this set of instruments and are stored together with the first-aid supplies in the cabinet.

Equipment also provided for more serious accidents

The inclusion **of** an **emergency hemostatic pad, a triangular bandage, and a 3-compartment insulated pouch** sets this kit apart from a simple assortment of bandages. These items provide additional supplies when an accident results in a more serious injury, particularly to the hand.

The emergency blanket completes this part of the kit, providing protection for the victim while awaiting appropriate medical care.

Burns and splashes: two risks also addressed

Mechanical or maintenance work can also expose workers to hot surfaces or flying debris. The kit therefore includes **10 bandages specifically designed for minor burns**, available in two sizes.

For the eyes, the **10 vials of saline solution and 10 sealed eye cups** ensure that rinsing supplies are readily available directly in the first-aid cabinet.

Maintaining Consistent Stock Levels in the Workshop

In a workshop where multiple technicians use the same first-aid cabinet, certain supplies may be used up more frequently than others. Having a **restocking kit specifically designed for mechanical and maintenance work** ensures that the intended contents are restored without replacing missing items with general-purpose products that would not be suitable for the same situations.

Periodic checks of the cabinet also allow you to verify remaining quantities, the condition of the packaging, and expiration dates to ensure supplies are available when a repair is needed.
