Emergency Kit for the Special Safety Plan

The **PPMS, or Specific Safety Plan**, is the operational plan that ensures the safety of people present in a school or other facility when a major incident occurs, pending the arrival of emergency responders and instructions from the authorities.

The **PPMS emergency kit made of polypropylene** allows for the consolidation of some of the equipment needed by this organization in a designated location. Its contents are not limited to first aid supplies: it includes **monitoring documents, practical materials for group management, and an emergency supply kit**.

Made of **blue polypropylene**, it features a carrying handle and a wall mount. Its large size makes it possible to keep first-aid supplies separate from documents and other accessories needed during an emergency.

A well-organized kit for a security incident

When a PPMS is activated, the needs may go beyond those of a one-time response. It may be necessary to monitor those present, keep records, provide lighting or information, and keep the group organized while they wait.

The contents of this kit reflect this approach by bringing together **three categories of equipment** : documents useful for monitoring the situation, the equipment needed for practical arrangements, and a first-aid kit.

Technical Specifications

	VAL 4048 PP
	Specific Safety Plan
	Polypropylene
	Blue
	Handle
	Wall mount

Dimensions	435 × 340 × 110 mm
Weight	2.8 kg

Organizational Documents and Materials

The first section of the kit is devoted to **monitoring individuals and the group's organization**. These documents are particularly useful for recording headcounts and relevant observations, while the radio, flashlight, armband, and notebook provide practical tools during the security operation.

Documents and Materials	Quantity
Blank Headcount Table - Appendix 8	1
Individual Observation Forms - Appendix 9	Included
"First-Response Procedures" Fact Sheet - Appendix 10	1
Armband	1
Battery-powered radio	1
Battery-powered flashlight	1
Adhesive tape	1
Paper towel roll	1
Disposable cups	20
Trash bags	2
Card game	1
Pen	1
Notebook	1

An Integrated Emergency Response Fund

The kit also includes a complete first-aid kit to handle any incidents that may occur during the situation: **minor wounds, bleeding, support needs, minor injuries, or eye irrigation**.

A variety of bandage and gauze sizes allow you to tailor the protection to the injury, while compression bandages, elastic bandages, and tubular bandages round out the range of support options.

Adhesive bandages, 10 × 6 cm	5
Sterile compression bandages	2
Individual sterile compresses, 20 × 20 cm	10
Individual sterile compresses, 30 × 30 cm	10
Elastic bands, 3 m × 5 cm	2
Elastic bands, 3 m × 7 cm	2
Elastic bands, 3 m × 10 cm	2
Tear-off bandage, 5 m × 2 cm	1 roll
Lister Scissors, 15 cm	1 pair
Flat-jaw splinter remover	1
Disposable gloves	5 pairs
Surgical-style protective masks	2
Chlorhexidine Cleansing Solution, 50 ml	1 spray bottle
200 ml hydroalcoholic solution	1 bottle
Sterile saline solution	10 pods
Tubular finger net	1 m
Tubular net for the wrist or ankle	1 m
Wrapped sugar cubes	10
Pack of disposable tissues	1 pack of 10
Periodic fillings	3
Instant Ice Pack	1
Plastic bags, 16 × 22 cm	2
First Aid Handbook in 10 Languages	1

Equipment that comes in handy when the group has to stay put

The battery-powered radio provides a source of information that is independent of the power grid, while the flashlight provides lighting that is readily available right in the case. The armband can be used to identify the person assigned a specific role within the group.

The **cups, trash bags, paper towels, tissues, and menstrual products** address practical needs that may arise when several people are gathered together for an unusually long period of time.

A predefined role within the PPMS organization

The case measures 435 × 340 × 110 mm and weighs 2.8 kg. It is therefore designed as a **Identified community facilities** rather than as a small, personal kit to carry around at all times.

Its wall mount allows it to be kept in a location familiar to staff. The number of kits and their distribution must be determined based on the locations designated in the PPMS plan and the number of people likely to be accommodated there.

Check the contents of the case regularly

A PPMS kit contains items that are not all checked in the same way: first-aid supplies, products with expiration dates, batteries, documents, and accessories. Periodic inspections allow for the replacement of used or expired products and ensure that the equipment is in good working order.

The specific needs of residents must be addressed separately when their individual care plans include specific medications, equipment, or instructions.
