PPMS First Aid Kit with Walkie-Talkie

The **PPMS, or Specific Safety Plan**, organizes the resources allocated by an institution to ensure people's safety in the event of a major incident and to manage the situation until emergency responders arrive or instructions are received from the authorities.

The **PPMS case with walkie-talkies** combines in a single container several categories of equipment needed by this organization: **communication tools, follow-up documents, practical materials for group management, and emergency supplies**. It is therefore a more comprehensive set of supplies than a simple first-aid kit.

Maintaining communication between multiple zones

The presence of **2 walkie-talkies with batteries** is one of the unique features of this kit. They allow two equipped users to communicate directly when they are in separate locations—for example, when multiple groups or multiple security zones need to remain coordinated.

The **battery-powered radio** It serves a different purpose: it allows users to receive information, whereas walkie-talkies are used for communication between users. A battery-powered flashlight complements this equipment when regular lighting is not available.

Technical Specifications

PPMS Case with Walkie-Talkies	
PPMS	Specific Safety Plan
Subject	Polypropylene
Transportation	Handle
Installation	Wall mount
Dimensions	435 × 340 × 110 mm
Weight	2.9 kg

Documents and Materials for Organizing the Group

The kit contains the documents needed to track individuals and useful information during the security screening process. It also includes several accessories designed to facilitate the practical organization of the group while they wait.

Documents and Materials	Quantity
Blank Headcount Table - Appendix 8	1
Individual Observation Forms - Appendix 9	Included
"First-Response Procedures" Fact Sheet - Appendix 10	1
Battery-powered walkie-talkies	2
Battery-powered radio	1
Battery-powered flashlight	1
Armband	1
Marseille Soap	1
Adhesive tape	1
Paper towel roll	1
Disposable cups	20
Trash bags	2
Card game	1
Pen	1
Notebook	1

A complete first-aid kit

A significant portion of the first-aid kit is dedicated to wound care. It includes various sizes of bandages and gauze pads for minor wounds, pressure bandages for bleeding, as well as elastic bandages, tubular bandages, and a triangular bandage for support.

Saline solution, chlorhexidine, gloves, a cold pack, and other supplies round out this kit to provide a versatile set of tools during the containment period.

Sterile compression bandages	2
Individual sterile compresses, 20 × 20 cm	10
Individual sterile compresses, 30 × 30 cm	10
Elastic bands, 3 m × 5 cm	2
Elastic bands, 3 m × 7 cm	2
Elastic bands, 3 m × 10 cm	2
Tear-off bandage, 5 m × 2 cm	1 roll
Lister Scissors, 15 cm	1 pair
Flat-jaw splinter remover	1
Disposable gloves	5 pairs
Surgical-style protective masks	2
Chlorhexidine Cleansing Solution, 50 ml	1 spray bottle
200 ml hydroalcoholic solution	1 bottle
Sterile saline solution	10 pods
Tubular finger net	1 m
Tubular net for the wrist or ankle	1 m
Wrapped sugar cubes	10
Pack of disposable tissues	1 pack of 10
Periodic fillings	3
Instant Ice Pack	1
Plastic bags	2
First Aid Handbook in 10 Languages	1

Facilities designed for group waiting

Some items do not serve a direct medical purpose but become important when several people need to stay together. The **20 cups, paper towels, trash bags, soap, tissues, and menstrual products** help meet various practical needs during the containment process.

As for the card game, it can help keep the group occupied while they wait, especially when children are involved.

A version tailored for situations where coordination is essential

The inclusion of walkie-talkies makes this case particularly useful when a facility has multiple secure areas or when different staff members need to be able to communicate quickly without having to move around.

This communication feature is what primarily sets it apart from a PPMS kit that does not include walkie-talkies, while maintaining the same approach to organizing and grouping emergency supplies.

A location known prior to the activation of the PPMS

With dimensions of **435 × 340 × 110 mm** Weighing 2.9 kg, the case is intended to serve as a designated shared piece of equipment. Its wall mount allows it to be assigned a permanent location, while the handle makes it easy to move if required by the organization's plans.

Its placement must be consistent with the locations and roles defined in the PPMS so that the equipment can be located quickly in a real-life situation.

Also check the batteries and communication devices

Periodic inspections of this first-aid kit should cover not only first-aid supplies but also electronic equipment. The **walkie-talkies, the radio, and the flashlight** must remain in working order and have batteries that are in good working condition.

Documents, expiring products, and used supplies must also be replaced to ensure that a complete and immediately available supply is maintained.
