Reflex Premiers Secours® First Aid Dispenser

A minor cut doesn't always require fetching a full first-aid kit. The **Reflex Premiers Secours® dispenser** allows you to keep the two supplies used for routine first aid right at the workplace: **a cleansing pad followed by a protective bandage**.

Its wall-mounted design allows it to be positioned near workstations where cuts are most likely to occur: machinery, workshops, preparation areas, shipping or receiving areas, as well as offices and common areas.

Clean, then protect: two steps immediately accessible

The dispenser is divided into **two compartments**. The first contains chlorhexidine-impregnated cleansing pads, and the second contains adhesive bandages. Pictograms on the dispenser allow users to quickly identify the correct order of use.

This design eliminates the need to search separately for the products required to treat a minor cut and makes them readily available at workstations.

Dispenser Features

	First aid for small and medium cuts
	Wall-mounted dispenser with 2 compartments
	100% recyclable cardboard
	Adhesive hook-and-loop strips
	Fill indicators visible on both sides
	370 g
	First Aid labeling provided with self-adhesive label

Composition

Contents	Quantity
Chlorhexidine cleansing wipes	50
Non-woven adhesive bandages, 53 × 70 mm	100

50 wipes for immediate cleaning of cuts

The **50 pads are impregnated with a chlorhexidine-based skin cleansing solution**. They are individually packaged to remain protected until use.

The solution is **alcohol-free, odorless, and colorless**. The dispenser also allows you to quickly identify the expiration date of the compresses, making it easier to track consumables.

100 bandages ready to protect the wound

The white bandages measure **53 × 70 mm**. They are made of soft, hypoallergenic, micro-ventilated, and stretchy nonwoven fabric.

Their flexibility makes them suitable for application to various areas of the body, including near joints. Their backing also provides water resistance suitable for use in potentially damp work environments.

Place first-aid supplies as close as possible to the risk area

The dispenser comes with **4 adhesive hook-and-loop pads** for removable wall mounting. It can thus be placed directly near a machine, a workbench, a logistics area, or any other workstation where minor cuts are common.

This placement reduces the need to walk around looking for first-aid supplies and ensures that supplies are immediately accessible to users.

Quickly see when the dispenser needs to be restocked

Fill indicators on both sides allow you to visually check remaining quantities without removing the dispenser. This feature makes it easier to monitor inventory and plan for when to restock compresses or bandages.

When closed, the container also helps protect the supplies from dust.

A lightweight, recyclable dispenser

The container is made of **100% recyclable cardboard**. Weighing only 370 g, it offers a lightweight, space-saving solution for setting up multiple first-aid stations in a workshop, warehouse, or other workplace settings.
