Wall-mounted bandage dispenser

The **wall-mounted bandage dispenser** allows consumables to be placed directly near workstations where minor cuts are likely to occur. This enables users to quickly access a bandage without having to search for a complete first-aid kit.

Two versions are available, each with a capacity of **76 adhesive bandages measuring 25 × 72 mm**: a flesh-colored version for general professional use and a blue, high-visibility version particularly suited for environments where visually identifying a bandage is an added challenge.

Skin-tone or blue bandages: which version should you choose?

The **flesh-colored bandage dispenser** is the versatile option. The discreet color of the bandages makes them suitable for offices, workshops, warehouses, retail stores, public facilities, and other professional environments.

The **blue bandage dispenser** is specifically designed to meet the needs of sectors where a bandage must be quickly identifiable. The blue color—which is uncommon in many food products—makes it particularly easy to spot during food preparation, processing, or catering activities.

Features	Skin-tone version	Blue Version
Total number of bandages	76	
Patch color	Skin-tone	Detectable blue
Elastic fabric bandages	36 bandages - 25 × 72 mm	
PE plastic bandages	40 bandages - 25 × 72 mm	
Dispenser material	High-strength acrylic	
Installation	Wall mounting - 2 mounting points	
Dimensions	180 × 110 × 30 mm	
Weight	170 g	

Two types of bandages in each dispenser

Each version contains **36 elastic fabric bandages** and **40 PE plastic bandages**. Both types of bandages are the

same size: 25 × 72 mm.

Having two types of materials allows for two different types of dressings to be available at a single dispensing point without requiring additional boxes or storage space.

A bandage accessible with one hand

The **Easy Pull** dispensing system is designed to allow the bandage to be removed with one hand. Upon removal, the two adhesive layers separate from their paper backing, preparing the bandage for application.

This feature is particularly convenient when a cut affects a hand or finger and the user has difficulty using both hands to open a standard package.

Install the bandages directly near high-risk workstations

The dispenser has **two wall-mounting points**. Its compact size of 180 × 110 × 30 mm allows it to be installed near a workbench, a machine, a production line, a preparation area, or a logistics station.

This placement keeps the bandages visible and accessible without cluttering the work surface.

The blue version for food processing environments

The **detectable blue bandages** are particularly well-suited for food preparation and processing activities, commercial kitchens, and other environments where the accidental presence of a bandage must be quickly identified.

The blue color creates a stark contrast with most food items, making it easier to spot the bandage.

Refills designed to keep the dispenser in service

The elastic fabric and PE plastic bandages are available as **Easy Pull refills**. This allows the dispenser to remain installed in its location and be restocked as supplies are used.

Regularly checking the supply level ensures that a first-aid station remains immediately available to users.
