PELI CRATE CR90 Waterproof Transport Case - 90 Liters

The **90-liter** PELI **CRATE CR90 waterproof transport case** is designed to protect, organize, and transport professional equipment in demanding environments. With its large storage capacity, rugged construction, and modular design, it provides a solution tailored to the needs of industry, maintenance, security, and emergency services.

IP67 waterproof, stackable, and equipped with the ModRail™ system, the PELI CRATE CR90 combines equipment protection with ease of use. Its removable lid, which opens from both sides, facilitates access to equipment, while compatible accessories allow you to customize its interior organization and mounting options.

A 90-liter storage crate designed for bulky equipment

With its **90-liter capacity**, the PELI CRATE CR90 allows you to store tools, measuring instruments, technical equipment, and emergency response gear all in a single container. Its elongated shape makes it easy to store bulky items and organize sets of equipment intended for a single activity.

This **large-volume professional transport case** is particularly well-suited for several areas of use:

- **Industry and maintenance:** storage and transport of tools, components, cables, and technical equipment.
- **Fire and emergency services:** organizing response kits, operational accessories, and support equipment.
- **Security and on-site operations:** grouping together equipment needed for field operations.
- **Construction sites and workshops:** protecting and storing equipment during transport or between uses.
- **Technical vehicles:** assembling sets of equipment that are easily identifiable and accessible.

By centralizing equipment in a single case, professionals can simplify the preparation for their operations and minimize the risk of equipment being scattered. Fragile devices, however, must be secured with internal padding appropriate for their sensitivity to shocks and vibrations.

IP67 waterproof protection and resistance to harsh conditions

The **PELI CRATE CR90** features a rugged polypropylene body, designed to withstand the handling, storage, and transport demands of professional environments.

Its **IP67 rating** guarantees **protection** against dust ingress and the effects of temporary immersion in water, under standardized test conditions and when the case is properly closed.

It also features an **automatic pressure-equalizing valve** that helps facilitate opening after c atmospheric pressure. Padlock holes allow the case to be secured with compatible locking devices.

This combination of features makes it a particularly suitable solution for equipment transported outdoors, exposed to the elements, or stored in dusty environments.

A removable lid for easy access to equipment

The PELI CRATE CR90 stands out for its **lid, which opens from both sides and is fully removable**. This design allows access to the contents to be adapted to the crate's layout and the constraints of the work environment.

Whether in a workshop, a storage area, or near a service vehicle, this flexibility makes it easier to retrieve equipment without having to reposition the case every time.

Reinforced handles make handling and moving the crate easier. However, the total weight of the assembly must be taken into account once the crate is loaded, particularly for lifting and manual transport operations.

A modular storage system with ModRail™

Accessories to customize equipment organization

The **ModRail™ system integrated into the PELI CRATE CR90** allows for the use of compatible mounting accessories to adapt the case to various storage and transport configurations.

This modularity meets the needs of professionals who wish to organize their equipment by job, activity, or type of equipment. It allows for configurations tailored to the constraints of workshops, service vehicles, and storage facilities.

The interior layout can also be supplemented with several compatible accessories:

- **CR90 Divider Kit:** allows you to compartmentalize the interior space for better organization of equipment.
- **Interior tray:** helps organize small tools and accessories, subject to availability.
- **MOLLE lid panel:** allows you to add compatible storage solutions.
- **ModRail™ accessories:** provide additional mounting and organization options, subject to availability.

The PELI CRATE CR90 is sold empty. Dividers, trays, organization panels, padlocks, and mounting accessories are sold separately, subject to availability.

Stackable cases to optimize storage space

The cases in the PELI CRATE line feature a **stackable design with an interlocking system**, designed to improve the stability of stacked cases and facilitate the organization of storage spaces.

This feature is particularly useful for storing multiple sets of equipment, especially in workshops, technical storage areas, or logistics facilities.

Compatible sizes within the line can be combined to create a storage configuration tailored to the volumes being

transported.

Caution: When transporting by vehicle, the stacking system does not replace a securing device appropriate for the weight and travel conditions.

PELI CRATE CR90: A Solution for Field Professionals

With its **90-liter capacity**, IP67 protection, removable lid, and customization options, the PELI CRATE CR90 meets the needs of professionals looking for a **rugged, waterproof, and customizable transport case**.

It allows users to assemble cohesive equipment sets, protect their contents from external hazards, and streamline daily organization.

Available in **black and Desert Tan**, it can be combined with other sizes in the PELI CRATE line to adapt storage capacity to different applications.

FAQ: Frequently Asked Questions About the PELI CRATE CR90

What is the ModRail™ system on the PELI CRATE CR90 used for?

The **ModRail™ system** is integrated into the exterior of the case and allows you to add compatible mounting accessories. In particular, it can accommodate attachment points for straps and help organize equipment during transport. ModRail™ accessories are sold separately.

What is the difference between the PELI CRATE CR45 and CR90 cases?

The **CR45 has a capacity of 45 liters**, making it suitable for compact equipment and small response kits. The **CR90 has a 90-liter capacity** and a more elongated shape, allowing you to transport more gear or bulkier equipment. Both models share the same principles of protection, stackability, and modularity.

How do you organize the interior of the PELI CRATE CR90?

The CR90 can be equipped with **modular dividers** to partition its interior space, a **removable tray** for small accessories, and a **MOLLE panel attached under the lid**. These accessories allow you to customize the storage to fit the tools, devices, and equipment being transported. They are available separately, depending on the specific models offered.

Can the PELI CRATE CR90 be used in a service or maintenance vehicle?

Yes, the CR90 can be used to organize and transport equipment in a **technical, maintenance, or service vehicle**. Its stackable design makes it easy to organize multiple crates. However, the crates must be properly secured using appropriate tie-down devices: stacking and the ModRail™ system alone do not replace secure tie-down.
