5 refills of 40 bandages each for a wall-mounted dispenser

These **25 × 72 mm PE plastic bandage refills** allow you to restock wall-mounted bandage dispensers while keeping the existing dispenser installed near workstations.

Each box contains **5 refills of 40 bandages** each, for a total of 200 bandages. Two colors are available: **flesh-colored or blue**.

A PE plastic backing

PE, or **polyethylene**, is the plastic backing used in this version. Farmor offers these bandages as an alternative to elastic fabric models.

Both colors feature strong adhesion, are hypoallergenic, latex-free, and designed to allow for removal without the pad sticking directly to the wound.

Features of both versions

Features	Skin-tone	Blue
Backing	PE (polyethylene) plastic	
Dimensions	25 × 72 mm	
Packaging	5 refills of 40 bandages each	
Total quantity	200 bandages	
Color	Flesh	Blue
Detectable	-	Yes
Water-resistant	-	Yes
Built-in aluminum foil	-	Yes
Latex-free	Yes	
Hypoallergenic	Yes	

200 bandages per box

Each refill contains 40 bandages, and the box contains five refills, for **a total of 200 bandages**. This packaging allows you to keep several refills on hand for the dispenser and replace them as needed.

A skin-tone version for everyday professional use

Flesh-colored bandages are suitable for everyday needs in workshops, warehouses, offices, institutions, and other professional settings where minor cuts may occur.

Their unique 25 × 72 mm size allows for a standardized supply to be stored directly in the wall-mounted dispenser.

A blue version specifically designed for sensitive environments

The blue bandages offer additional features. Farmor describes them as **detectable** and water-resistant, with no discoloration upon contact with moisture.

An **aluminum foil layer is integrated between the pad and the adhesive backing**. Farmor also states that this product complies with HACCP, IFS, and BRC standards, making this version particularly suitable for the food industry, commercial kitchens, and other food-processing environments.

Restock Without Replacing the Dispenser

The refill system allows the wall-mounted dispenser to remain in place while only the bandages are replaced. This setup makes it easier to maintain a visible and accessible first-aid station in the immediate vicinity of workstations.
