Car First Aid Kit for 4 to 6 People

When a vehicle is used daily by several employees, first-aid supplies must remain available while on the road, even when the team is far from its workshop, depot, or usual premises.

The **4- to 6-Person Vehicle First Aid Kit** contains supplies suitable for treating minor injuries that may occur during a job, a business trip, a loading operation, or fieldwork.

Its larger size compared to the 2- to 4-person vehicle first aid kit allows for more supplies while still maintaining a easily transportable container.

A kit designed to remain on board the vehicle

The **fluorescent yellow polyurethane** case, combined with a retro-reflective cross, makes it easy to identify the first-aid supplies in a trunk, a cab, or among other professional equipment.

The zipper closure provides access to **the** various **interior storage pockets**, designed to organize supplies and allow you to quickly find the item you need. The handle makes it easy to carry the kit and can also be used to hang it.

Technical Specifications

	4 to 6 people
	Waterproof polyurethane (PU)
	Fluorescent yellow
	Retroreflective cross
	Zipper
	Multiple interior pockets
	Handle
	220 × 180 × 70 mm

Weight	460 g

An expanded kit for 4 to 6 people

The kit includes several sizes of bandages and a total of **10 sterile gauze pads**, along with elastic bandages and a roll of adhesive tape. This quantity, which exceeds that of a small vehicle first-aid kit, ensures there are more supplies available when a vehicle is used by multiple people.

A survival blanket, skin-cleaning products, saline solution, and the necessary first-aid instruments round out the kit.

Kit Contents

Contents	Quantity
Survival blanket	1
Single-use chemical breathalyzer tests	2
Adhesive bandages, 20 × 72 mm	15
Adhesive bandages, 53 × 70 mm	6
Adhesive bandages 10 × 6 cm	2
Sterile pouches containing 5 compresses, 7.5 × 7.5 cm	2
Elastic bandages, 3 m × 5 cm	2
Elastic bandage, 3 m × 7 cm	1
Tear-off adhesive tape, 5 m × 2 cm	1 roll
Round-tip scissors	1 pair
Flat-jaw splinter remover	1
Disposable gloves	1 pair
Chlorhexidine cleansing wipes	4
70° alcohol swabs	4
Calendula-infused anti-bruise pads	4
Drying lotion compresses	4
Sterile saline solution	2 packets
First aid booklet in 10 languages	1

Extra bandages for shared use

The kit contains **23 adhesive bandages in three different sizes**. This variety allows you to choose the right size for different small wounds and ensures you have a sufficient supply when multiple people are using the same vehicle.

Sterile gauze pads, elastic bandages, and adhesive tape provide additional protection when an injury requires more than just an adhesive bandage.

Cleaning minor wounds and treating bumps

Four chlorhexidine cleansing pads and four 70° alcohol pads are included in the kit. These are supplemented by **4 calendula pads** for minor bumps and 4 drying lotion pads.

The round-tipped scissors, splinter remover, and pair of gloves provide the essential tools needed to use the supplies.

A rinsing solution available while on the go

Two single-use vials of **sterile saline solution** are provided so that a rinsing solution is readily available right in the vehicle, particularly in case of dust or small particles getting into the eye.

This is useful when the team is working far from a facility with a first-aid station.

Two breathalyzers included in the vehicle kit

The kit includes **2 single-use chemical breathalyzers**. Farmor specifies that these models comply with the **NF X 20-702** standard.

They complement the kit's specific automotive purpose, alongside traditional first-aid supplies.

A kit designed for crew vehicles

This kit, designed for 4 to 6 people, is particularly well-suited for **utility vehicles, emergency response vehicles, maintenance vehicles, or vehicles that regularly transport multiple employees**.

Measuring 220 × 180 × 70 mm and weighing 460 g, the kit remains compact while offering a more extensive selection of supplies than models designed for 2 to 4 people.

Schedule periodic checks of the contents

Temperature fluctuations, travel, and repeated handling require regular inspection of a first-aid kit stored in a vehicle. Used or expired supplies must be replaced to ensure the kit remains fully stocked.

It is also helpful to ensure that the kit remains in the same location in the vehicle so that team members can find it quickly when needed.
