Large 2-door medicine cabinet

The empty white first-aid cabinet provides ample storage space to centralize first-aid supplies and accessories for a business, workshop, public institution, or local government agency.

Delivered without supplies, it allows you to create a **customized first-aid kit** tailored to the number of employees, the site's activities, and the main identified risks. Its large interior volume and numerous shelves make it easy to organize different categories of products.

A high-capacity first-aid cabinet

This cabinet stands out for its dimensions of **530 × 530 × 190 mm** and its interior layout, which includes **12 plastic shelves**.

This layout allows for the clear organization of various supplies: bandages, gauze pads, adhesive tape, cleaning products, eye wash kits, gloves, and other first-aid accessories.

The two doors provide wide access to the interior of the cabinet, making it easy to store items, conduct periodic inspections, and restock used supplies.

	12 plastic shelves
	Comes with 2 keys
	First aid signage included
	530 × 530 × 190 mm

Weight	6.95 kg
First Aid Contents	Cabinet shipped empty

12 shelves for organizing supplies

The **12 plastic shelves** allow you to organize the interior space and separate items based on their function or frequency of use.

This makes it possible to designate certain areas for bandages and gauze pads, others for tape and fixation products, or to group together rinsing solutions, gloves, and small first-aid supplies separately.

This organization also facilitates inventory checks by allowing you to quickly identify missing or expiring products.

Two doors for quick access to contents

The **two-door** design allows the cabinet to open wide for easy access to the various shelves.

This design is particularly well-suited when the cabinet contains a large inventory or when multiple categories of products need to remain immediately accessible.

Key-locked closure for controlled access

The cabinet comes with **two keys**. This locking system allows you to restrict access to the contents when necessary, while keeping a spare key on hand for the person or department responsible for the supplies.

The included first-aid signage clearly identifies the cabinet’s purpose within the facility.

A cabinet delivered empty so you can customize its contents

This cabinet is supplied **without first-aid supplies**. Its contents can therefore be customized freely based on the establishment’s activities and the risks encountered.

This configuration is particularly well-suited for businesses that wish to tailor their equipment to their actual needs: industrial environments, maintenance, construction, offices, local governments, or other professional activities.
