QC Blank Caps 1½" Connector Plug

The Mercedes Textiles Quick Connect 1½" plug is designed to seal a compatible quick-connect fitting to protect an outlet or inlet when it is not in use.

It is part of the Mercedes Textiles Quick Connect line, designed to enable quick connections via **a quarter-turn lock**.

Protection for a 1½" Quick Connect half-coupling

Once installed, the cap seals the connection and helps protect the system from dirt or foreign objects during transport, storage, or when the equipment is not in use.

Its quick-mount design allows it to be easily installed or removed when preparing the equipment.

Quick-connect quarter-turn coupling

The cap uses the same **1½" Quick Connect** system as the other half-couplings and adapters in the Mercedes Textiles line.

Assembly is accomplished by rotating the cap approximately a quarter-turn, eliminating the need for a threaded cap that requires multiple turns to secure.

Die-cast aluminum construction

This version is made of **die-cast aluminum**. It is therefore well-suited for mobile firefighting equipment and installations requiring regular handling.

Technical Specifications

	Plug
	Quick Connect 1½"

Locking mechanism	Quarter-turn
Material	Die-cast aluminum
Manufacturer	Mercedes Textiles

Applications

- Plug for a **1½" Quick Connect half-coupling**
- Protection of a **motor pump** outlet
- Temporary closure of a water supply line
- Protecting connections during transport or storage
- Equipping fire suppression systems that use the Quick Connect system

Carefully check the connection system

This plug is designed for the **1½" Quick Connect** system. It should not be confused with a threaded plug, a Storz coupling, or any other quick-connect standard.

Before ordering, you should therefore verify that the coupling on the equipment is indeed compatible with the Quick Connect system.
