Manikin newborn care Susie and Simon

Susie and Simon neonatal care mannequin - Medical simulation for nursing and resuscitation training

The Susie Simon is a **highly realistic medical simulation mannequin** designed for training in nursing and neonatal resuscitation techniques. This full-term newborn patient simulator enables healthcare professionals to train in critical care, including nasogastric intubation, urinary catheterization and cardiopulmonary resuscitation (CPR) on a newborn. With its anatomically precise design, the Susie Simon S100 offers immersive training that helps learners develop essential neonatal healthcare skills. This innovative manikin is designed with interchangeable genitalia, allowing easy transformation between female and male configurations, offering **versatility** and greater **flexibility** and **simplified use** in healthcare.

Features:

- **Full-term newborn simulator**: Realistic reproduction of a full-term infant, ideal for emergency care and resuscitation training.
- **High-fidelity materials**: Molded in soft silicone for a realistic feel, to deliver quality medical simulation.
- **Neonatal CPR training**: Learn cardiopulmonary resuscitation on a realistic mannequin, to perfect emergency gestures.
- **Intubation and catheterization skills**: Practice invasive procedures such as nasogastric intubation and catheterization (male and female).
- **Ease of maintenance**: Replaceable components to ensure optimum manikin durability, even after thousands of hours of training.
- **Realistic dimensions**: Size and weight of a full-term infant, for a realistic simulation experience in a clinical environment.

Benefits:

- **Immersive, hands-on training**: This simulation mannequin enables learners to experience emergency situations in complete safety, honing their skills in neonatal resuscitation and emergency medical care.
- **Improved clinical confidence**: Thanks to its realistic design, the mannequin helps healthcare professionals familiarize themselves with critical technical gestures, boosting their confidence and efficiency in real-life situations.
- **Training for invasive procedures**: The Susie Simon S100 manikin enables simulation of essential

invasive procedures such as nasogastric intubation and catheterization, providing comprehensive training for caregivers working in neonatal intensive care.

- **Simulation of emergency scenarios**: The mannequin can be used to simulate a wide range of clinical scenarios, enabling students and healthcare professionals to train in conditions close to reality.
- **A long-lasting investment**: Thanks to its robust structure and replaceable components, the Susie Simon S100 manikin offers long-lasting medical training and is suitable for long-term use in training centers, health schools and hospitals.
- **Interchangeable genitalia**: Equipped with interchangeable genitalia for easy transformation between female and male configurations, this manikin offers increased flexibility to adapt to a variety of medical scenarios.

Uses:

The Susie Simon S100 is an essential tool for healthcare institutions, medical training schools and simulation centers. It is particularly useful for :

Nursing training: This mannequin is suitable for advanced training in pediatric care, enabling students to learn vital resuscitation and infant care techniques.

Neonatal resuscitation courses: Healthcare professionals can perfect their neonatal resuscitation (CPR) skills on a realistic mannequin, enabling them to manage emergencies effectively.

Invasive care training: Caregivers can perform nasogastric intubation and urinary catheterization on a mannequin that faithfully reproduces the anatomy of a full-term infant.

The Susie Simon S100 mannequin is **an essential medical simulation tool** for nursing training and pediatric emergency management. Its **realistic design** and extensive functionality make it ideal for developing essential skills such as neonatal resuscitation, nasogastric intubation and urinary catheterization. Perfect for health schools, hospitals and training centers, the Susie Simon S100 is the ideal investment for any institution seeking to improve the quality of infant care and effectively prepare its healthcare professionals for emergency situations.
