Breast palpation examination simulator

Breast palpation model: a realistic teaching tool for breast cancer screening.

This **life-size** cast of a medium-sized female bust, made **from high-quality silicone**, is a **state-of-the-art teaching tool** for breast cancer screening and prevention. It enables healthcare professionals, medical students and patients to learn and practice breast examination and self-examination **realistically and effectively.**

This **highly realistic bust** reproduces not only the general shape of the breast, but also the finest skin structures, enabling simulation of real palpation conditions. It's ideal for field or academic training, to help raise awareness and provide hands-on training in self-screening and the various breast abnormalities.

Features:

High-quality material: Made from silicone, a top-of-the-range material, dermatologically tested to guarantee risk-free use.

Realistic structure: Faithful reproduction of fine skin structures, for a particularly realistic feel.

Interactive model: Breast examination and self-examination possible in the "carried"(standing) or horizontal flat position, depending on the type of training or demonstration.

Realistic abnormalities: The bust is designed with various supposedly benign and malignant alterations at different stages, including:

- Two mobile benign tumors
- Three malignant tumors
- A retracted nipple
- Orange peel skin
- Two other palpable tumors

Accessories included: The bust comes complete with talcum powder, Velcro® straps and stand, for easy handling and storage.

Benefits:

- **Realistic and functional**:The bust is designed to offer tactile sensitivity extremely close to that of human skin, making learning more precise and concrete.
- **Suitable for different educational contexts**:It's perfect for live demonstrations, hands-on workshops and group training.
- **Versatile use**: Thanks to its ability to simulate different breast anomalies, this bust can be used to illustrate a wide range of possible situations during clinical examination.
- **Easy care and handling**: Its design makes it easy to clean, and the Velcro® straps ensure a secure hold during demonstrations.

Uses:

This silicone female bust is designed for :

Train healthcare professionals (doctors, nurses, midwives) in the detection of breast anomalies and the correct practice of screening and self-examination techniques.

Raise patients' awareness of the importance of prevention and breast self-examination for the early detection of breast cancer.

Simulate various breast abnormalities to provide more comprehensive training, simulating both benign and malignant conditions, to better prepare professionals and patients for real-life situations.

Use in educational environments such as universities, health schools, or on hospital prevention days.

The silicone female bust is an **indispensable teaching tool for breast cancer screening education and training**. Thanks to its realistic design and numerous practical features, it provides a concrete, immersive approach, whether for healthcare professionals or patients wishing to learn how to perform a self-examination in complete safety. Offering excellent value for money, this bust is a first-rate choice for raising awareness of breast cancer prevention and early detection.
