Training arm for intravenous injection and infusion

The Intravenous Injection and Infusion Training Arm is a **top-of-the-range model** designed to provide **realistic, professional training in a medical environment**. Ideal for learning and perfecting blood collection techniques, this injection arm is particularly suited to training healthcare professionals, whether students, nurses or doctors. Its exceptional realism enables users to train on simulated injections and intravenous infusions in the best possible conditions.

Features :

- **Realistic design**: The training arm features modifiable skin and veins, offering a learning experience close to reality.
- **Authentic piercing sensation**: When injecting or drawing blood, healthcare professionals can feel the resistance and sensation of piercing just like on a real patient.
- **Durable materials**: Designed for long life, the model requires little maintenance and wearing parts can be easily replaced.
- **Accessories included**: The arm comes with all the components needed for complete training, including an armrest, fluid container and artificial blood.

The injection arm comes with all the accessories needed for optimal use:

- 1 adult injection arm with skin and venous system
- 1 armrest for stable support during training
- 4 fluid containers for infusion and injection
- 1 250 ml of artificial blood to simulate blood sampling
- 1 holder for artificial blood
- 1 instruction manual for easy assembly and use

Benefits:

- **Realistic training**: Thanks to its flexible skin and modifiable veins, the training arm perfectly simulates real-life conditions for intravenous injection, infusion and blood sampling.
- **Economy**: At an affordable price, it offers a cost-effective option to similar products, while maintaining a

high level of quality. Wear parts are easy and inexpensive to replace, enabling extended use.

- **Ideal for group training**: This model is perfectly suited to group use, making it a preferred choice for schools, hospitals and training centers.
- **Easy to maintain**: Maintenance is quick and simple, allowing users to concentrate on their practice without worrying about technical problems.

Uses:

The training arm is designed for use in a variety of training contexts:

Intravenous injection: Ideal for learning the correct technique for injecting into veins.

Intravenous infusion: Practice setting up and managing infusions.

Blood sampling: Practice safe blood sampling.

Vein palpation: Perfect your ability to locate and palpate veins prior to injection.

Creating an intravenous access: Learn how to install a vascular access safely and effectively.

The Erler-Zimmer intravenous injection and infusion training arm is the ideal tool for healthcare professionals in training. Offering impressive realism at an affordable price, it enables perfect practice of medical gestures related to injections, infusions and blood sampling. Easy to maintain, with easily replaceable wearing parts, it is a lasting investment for schools and hospitals. With a 5-year warranty and high-quality German manufacture, this model meets all the requirements of medical training.
