

Manikin mK2 teenage sea rescue

Man overboard training dummies - Aquatic rescue dummy

Designed to simulate "Man overboard" situations, this teenage dummy is used by forces such as NATO, the UK and US navies, 100% of the UK fire service, as well as marine rescue agencies including the RNLI and the coastguard. Their realistic design enables rescue teams to train effectively in aquatic recovery operations.

Key features of the aquatic rescue dummy :

- **Adjustable buoyancy:** This model can float horizontally or vertically to simulate a living person or an inanimate body. Simply move the foam parts inside the suit to adjust buoyancy in seconds.
- **Enhanced visibility:** Bright orange wetsuits and SOLAS reflective strips on the head make the models highly visible in open water, making them easy to spot during rescue exercises.
- **Back buckle:** A buckle on the back allows the dummy to be lowered into position or hung up to dry.
- **Sturdiness:** This mannequin is designed to withstand the harsh conditions of sea training, ensuring exceptional durability and longevity.
- **Dimensions:** 1m30 / 20 kilos

Product details:

- **High-quality materials:** Made from materials that comply with industry standards, these dummies ensure optimum performance and long life.
- **Realistic design:** The dummies are designed to represent the anatomical weight distribution of a real person, providing a realistic training experience.

Why choose our rescue dummy:

Choose a robust, realistic aquatic rescue dummy designed for intensive training in the marine environment. Its design enables rescue teams to perfect their victim recovery skills at sea, providing an effective and realistic training experience.

Order your aquatic rescue dummy today and enhance your rescue operations with high-quality equipment!
