

## CASPER dog for CPR training

### Casper, the CPR dog

Casper is a training dummy designed to teach and practice cardiopulmonary resuscitation (CPR) specifically on a dog. This model is equipped with airways in the form of disposable masks, enabling the "mouth-to-mouth" resuscitation technique to be taught simply, hygienically and effectively. The masks are single-use, guaranteeing a clean and safe environment for each student, with no risk of cross-contamination. Casper enables training in vital dog CPR gestures, realistically reproducing the interventions needed in an emergency.

### Features :

- **Dog CPR mannequin:** Simulates canine resuscitation with movements adapted to canine anatomy.
- **Disposable lung masks:** Single-use masks for mouth-to-mouth ventilation without the risk of cross-contamination.
- **Removable, interchangeable components:** Airways (masks) are easily replaced without tools, for fast, convenient use.
- **Compact and lightweight:** Easy for trainers and students to carry and handle.
- **Comprehensive CPR training:** Provides training in hand placement, depth of compressions, airway management and proper ventilation.
- **Practical for professionals:** Suitable for veterinarians, first aiders and animal CPR trainers.

### Benefits:

- **Improved hygiene:** The use of disposable masks reduces the risk of cross-contamination between users. No need to disinfect the mannequin after each session.
- **Simplicity of use:** Airways are easy to replace, ensuring efficient training sessions without wasting time.
- **Gesture precision:** The manikin enables realistic learning of resuscitation, with precise control of the depth of compressions and administration of ventilation.
- **Economy:** Disposable masks are inexpensive and eliminate the cost of maintaining and disinfecting the mannequin after each use.
- **Safety:** The disposable mask system ensures optimum hygiene and prevents the transmission of disease between students.

## Applications :

**Animal resuscitation training:** Perfect for veterinary schools, animal first-aid training courses or veterinary practices wishing to train their staff in emergency procedures.

**Emergency preparedness:** Learn how to react quickly and effectively in the event of resuscitation of a dog, whether in a professional or domestic setting.

**Dog training:** The dummy can also be used to teach dog owners good emergency rescue practices.

**Teaching tool:** Ideal for trainers teaching canine first aid, particularly in animal first aid courses.

The Casper CPR dog is an **essential tool for anyone wishing to learn and teach resuscitation techniques on a dog**. Its easy-to-replace disposable mask system guarantees hygienic and effective training. Thanks to its practical design and ease of use, Casper lets you **concentrate on the technical gestures of resuscitation**, while ensuring a safe and professional learning experience. Indispensable for veterinarians, animal rescuers and all animal lovers:

The Casper CPR dog transforms learning canine resuscitation into an accessible and realistic experience.
