# Hormonal contraceptive implant simulator

## Hormonal contraceptive implant insertion training dummy.

This left-arm dummy with soft foam is designed specifically for**training in the insertion and removal of hormonal contraceptive implants**, such as those containing Levonorgestrel. It enables healthcare professionals to perfect their subcutaneous implant insertion technique under realistic conditions before performing the procedure on patients. The model is supplied with 5 implant tubes (representing hormonal implants) and additional skin to repeat the exercise several times. The device is mounted on a stable stand for safe, convenient use.

## Features:

- **Quality soft foam**: Realistic reproduction of skin and subcutaneous tissue, enabling high-precision training.
- **5 implants included**: 5 hormonal implant tubes for repeated insertion and removal simulations.
- **Additional skin**: 1 interchangeable skin to extend the life of the device and repeat the exercise without loss of realism.
- **Integrated stand**: The mannequin is mounted on a stable stand, ensuring an ergonomic position and comfortable training for healthcare professionals.
- **Realistic dimensions**: Designed to reproduce the size and anatomical position of the human left arm.
- **Durable materials**: Wear-resistant, easy to clean and designed for intensive use.

## Benefits:

- **Realistic simulation**: The texture and suppleness of the arm with soft foam provide a training experience close to reality, essential for mastering the insertion and removal of hormonal contraceptive implants.
- **Repeated practice**: With 5 implants and interchangeable skin, this model enables healthcare professionals to repeat training on a regular basis and perfect their skills without limiting the number of simulations.
- **Ease of use**: The mannequin is mounted on a stable stand, facilitating learning in an ergonomic position, and is designed for safe and comfortable use.
- **Versatility**: This model is compatible with different types of hormonal implants, offering versatile training for various contraceptive devices.

- **Durability**: Designed for prolonged use, this model withstands frequent handling and intense training conditions.

## Use:

The mannequin is ideal for:

**Training healthcare professionals**: Used in medical schools, hospitals, clinics and practices, it enables doctors, nurses and other practitioners to train in the insertion and removal of hormonal implants.

**Improved practical skills**: Allows you to familiarize yourself with the procedure for inserting subcutaneous implants, and acquire the dexterity needed before working on real patients.

**Compliance with safety protocols**: Allows practice in a controlled environment, reducing the risk of error during procedures on real patients.

This **training dummy** for **insertion and removal of hormonal contraceptive implants** is an **indispensable tool** for healthcare professionals wishing to perfect their technique in a safe, realistic setting. Thanks to its quality features, durability and realism, it enables effective learning and optimal preparation before moving on to patient procedures. The model is designed to provide a comprehensive, reproducible training experience, while guaranteeing prolonged, stress-free use.
