

Baby intubation simulation head

Baby intubation head - simulation model for oral and nasal intubation training.

The Baby Intubation Head is a **high-quality simulation model** designed for training in nasal and oral intubation of infants. This detailed educational tool enables healthcare professionals to acquire full mastery of technical gestures in a clinical environment. The head includes precise anatomical landmarks, such as the uvula, vocal cords, glottis, epiglottis, larynx, arytenoid cartilage, trachea, esophagus, as well as inflatable lungs and stomach for realistic intubation simulation. The vocal cords are also highlighted in white, facilitating laryngoscopic visualization and orientation for professionals during the procedure.

Features:

- **Anatomical landmarks:** inflatable uvula, vocal cords, glottis, epiglottis, larynx, arytenoid cartilage, trachea, esophagus, lungs and stomach.
- **Oral and nasal intubation:** Enables simulated nasal and oral intubation.
- **Vocal cords highlighted in white:** Improves visibility and precision during intubation procedures.
- **Material:** Latex-free, guaranteeing allergy-free use.
- **Accessories included:** Practical carry bag and lubricant for easy handling.
- **Dimensions:** 15 x 10 x 8 inches (approx. 38 x 25 x 20 cm).
- **Ease of use:** Designed for simple, realistic handling during hands-on training.

Benefits:

- **Realistic training:** Anatomical details and inflatable structures enable faithful simulation of infant anatomy for safe intubation procedures.
- **Improved visibility:** Vocal cords highlighted in white ensure better visualization, essential for accurate training and effective handling.
- **Versatility:** Suitable for both nasal and oral intubation, enabling comprehensive training for pediatric emergency scenarios.
- **Latex-free:** Ensures added safety for allergen-sensitive users.
- **Convenient:** The included carry bag enables easy storage and optimal transportability, while the lubricant facilitates gesture simulation.

Uses:

The Baby Intubation Head is ideal for pediatric resuscitation training, advanced first aid courses and hospital emergency simulations. It is suitable for trainers, medical students and healthcare professionals wishing to perfect their skills in infant intubation techniques. Thanks to its clear anatomical markings and inflatable structures, it offers an immersive, realistic learning experience. The carry bag and lubricant included make it easy to use in any situation.

The Baby Intubation Head is a **must-have teaching tool** for all pediatric intubation training. Its detailed design and anatomical markings enable precise, effective simulation, while guaranteeing optimum safety for the user. Its ease of use and practical accessories make it an ideal ally for healthcare professionals seeking to improve their skills. Whether you're a trainer, student or practitioner, this intubation head will help you master the techniques essential for effective intervention in pediatric emergencies.
